

Get the most out of your Link 370 dongle

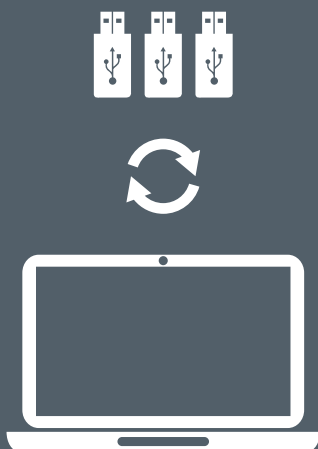

The position and location of your Jabra Link 370 may affect the Bluetooth range or impact the audio quality of your device.

With the rapid development of computer laptops to include more technology within limited space, some laptop designs may have noisy electronic components fitted close to USB ports. This may create electronic interference (EMC) with USB ports, which could impact the audio experience when connected to the Jabra Link 370.

To get the most out of your Jabra Link 370, place it at a level where there is line of sight or only a few obstacles between the headset or speakerphone and the Jabra Link 370.

If there are additional USB ports on the computer, try placing the Jabra Link 370 in a different USB port location.

A shielded USB extension cable will increase the distance to potential electronic noise from the computer and thereby minimize performance impact on the Jabra Link 370.

Note: When using an USB extension cable, make sure it supports data transfer, so the Jabra Link 370 will work properly.
